

Prompt - Research anything using AI

Prompt Part 1: Ask a generic Question

I want to know [eg. How to improve sleep quality naturally]. Please break it down into 4–6 key findings, find credible sources, and summarise the insights in simple, clear language. Organise everything into sections and share the links you used.

Prompt Part 2: Ask for some data points

I need accurate, data-backed information on [eg. How many engineers graduate in India each year?].

Please give me:

- Verified statistics and numbers
- Latest government, academic, or industry sources
- Clear citations and links
- A short explanation of how reliable each source is

Prompt Part 3: Detailed Deep research with links and research document

Help me deeply research [How AI will impact white-collar jobs in India]. Please follow a structured research process and create a clear, easy-to-read research document.

1. Break Down the Topic

Identify the 5–7 most important questions I should understand about this topic.

2. Research Using High-Quality Sources

Pull data and insights from:

- Government sources
 - Academic papers
 - Industry reports
 - Trusted news outlets
 - Expert commentary
- Please include the exact links for everything.

3. Summarise the Findings Clearly

For each research question, give me:

- A short summary in simple language

- The key insights or numbers I should know
- What each source says (agree/disagree)

4. Compare the Sources

Highlight:

- Where sources agree
- Where they disagree
- Why the differences exist
- Which source is the most credible and why

5. Explain the Implications

Tell me what the data actually means in real life.
Explain the impact in simple, practical terms.

6. Create a Final Research Document

Organise everything into a clean, structured format with:

- A one-paragraph overview
- Bullet-point takeaways
- Key data and statistics
- Insights and implications
- A “What You Should Know” summary
- A list of all links used (with 1-line credibility notes)

7. End With Next Steps

Recommend:

- Follow-up questions to explore further
- Additional angles or data I should look for
- Any risks, limitations, or biases in the available research

Keep the language clear
