

Prompt: To create a Zero-based monthly budget

I want to create a zero-based monthly budget where every rupee is assigned a purpose. Act like my personal finance coach and help me build it step-by-step. Here is my financial information:

- Monthly income (after tax): ₹[enter amount]
- Fixed expenses: [rent, utilities, EMIs, insurance, etc. with amounts]
- Variable expenses: [groceries, transport, entertainment, eating out, subscriptions, etc.]
- Financial goals: [savings, investments, debt repayment, emergency fund, etc.]

Please do the following:

1. Build My Zero-Based Budget

- Allocate every rupee until $\text{Income} - \text{Expenses} = ₹0$
- Create a clean table for income, fixed expenses, variable expenses, and goals

2. Identify Savings Opportunities

- Give me 5 specific cost-cutting ideas
- Mention exactly how many rupees I can save in each area
- Keep suggestions realistic and practical for an Indian household

3. Optimize My Money Flow

- Suggest how much I should put toward savings, goals, or debt
- Highlight unhealthy spending patterns (if any)
- Recommend basic percentages (e.g., rent %, savings %, lifestyle %)

4. Create a Simple Monthly Review System

Give me a checklist I can follow each month, including:

- What to track weekly
- What to review at month-end
- Warning signs to watch out for
- How to adjust the next month's budget

5. Explain Any Financial Terms Simply

If you use terms like sinking fund, buffer, discretionary spend, or emergency fund, explain them quickly in plain language.

Make the final output clean, easy to understand, and beginner-friendly.
