

Prompt: Planning your investments

I'm new to investing and I want to understand mutual funds and create a simple investment plan. Please explain everything in very easy terms. Here are my details:

- **Age:** [your age]
- **Monthly income:** ₹[amount]
- **Amount I can invest monthly:** ₹[amount]
- **Current savings:** ₹[amount]
- **My goals:** [retirement, house down payment, wealth building, child's education, emergency fund, etc.]
- **Time horizon:** [how many years until I need this money]
- **Risk comfort level:** [conservative / moderate / aggressive / not sure]

Please help me with the following:

1. Explain Mutual Funds Simply

Give me a beginner-friendly explanation:

- What mutual funds are
- How SIPs work
- What equity, debt, and hybrid funds mean
- How risk and returns generally compare

2. Recommend the Right Types of Mutual Funds for Me

Based on my goals, timeline, and risk level, tell me:

- Which fund categories fit me (equity, debt, hybrid, index funds, etc.)
- How much I should invest into each (with % split)

3. Create a Simple Monthly SIP Plan

Provide a clear plan I can follow:

- Fund type → % allocation → suggested SIP amount
- Suggest 2–3 sample fund categories (not brand names if not allowed)
- Show expected long-term outcomes in simple language

4. Explain How My Money Can Grow

Give me easy-to-understand projections using basic assumptions.

5. Give Me a Safety Checklist

Include:

- Emergency fund basics
- How long to stay invested
- Mistakes beginners should avoid

6. Create a Simple Tracking System

Show me how to review my investments once every 6–12 months.

Explain everything in the simplest possible terms — no jargon unless you define it.
